

Search

Search trigger & form

Rules: Use a universally recognized search icon (magnifying glass) in the header and ensure icon is easily clickable/tappable and stands out from the other header elements

Provide an accessible label using area-label to describe the icon (e.g “Open search”) and enable keyboard focus and activation for users who navigate via keyboard.

Icon should remain visible on all devices, if space is limited on smaller screens consider alternative placement that do not compromise accessibility.

Clicking the search icon will open a full screen modal with a close button and the search input text and submit.

Search

Results Page

Rules: Display the user's search query so they know what was searched

Present results in a clean and organized list with clear headings with link, short description and any relevant metadata like dates or categories.

Limit the number of results and provide pagination if there are multiple results.

Clearly indicate if there are no results found, and offer alternative search option.

Maintain visual consistency with the rest of the site's design, ensuring that typography, spacings and colors follow the proposed design.

Use proper hover and focus states for the links.
