

Certificate Revocation

Objective:

Ensure your system correctly performs the certificate validity check.

Guidelines:

- The deployed system should be able to check the certificate validity i.e. to check if the certificate is not revoked. Two protocols are used:
 - OCSP (Online Certificate Status Protocol) and /or
 - CRL (Certificate Revocation List).
 - Ensure that revoked certificates are rejected by the system, and log the event for auditing purposes.
The user should get a proper communication message in case a revoked certificate is used
-
