

Signature and Certification Processing Time

Objective

Set clear expectations for how long signing and certification operations should take.

Guidelines

Under normal operating conditions, a signature or certification operation is expected to complete within this range:

Expected processing time

Minimum about 300 milliseconds (0.3 seconds)

Maximum about 1.5 seconds

- Treat this range as the normal processing window for signing and certification.
- If your system regularly takes longer than this, investigate—it may point to an integration, network, or configuration problem.
